

BEN SLIMA Mahdi

[Sfax, Tunisia \(open to relocate\)](#) | [+33 07 74 91 75 56](#) | [mahdi@devaura.pro](#) | [linkedin](#) | [github](#)

Platform / DevOps engineer building and operating cloud infrastructure and developer platforms in multi-cloud environments.

Delivered improvements in deployment efficiency, system reliability, and cost optimization in production settings.

Driven by a systems approach to engineering, with focus on resilience, security, and designing for failure and recovery.

WORK EXPERIENCE

Devaura

September 2025 - March 2026

Platform Engineer

Sfax, Tunisia

- Built and scaled an internal developer platform, reducing deployment friction by 40% and standardizing delivery across multi-cloud environments.
- Designed a self-service infrastructure model, enabling teams to deploy independently while enforcing GitOps and platform guardrails.
- Architected multi-cloud disaster recovery (AWS → Azure) with automated failover, ensuring service continuity with <1h RPO.
- Implemented event-driven scaling and self-healing mechanisms, improving system resilience and reducing manual intervention.
- Established secure-by-design platform practices (IAM, secrets lifecycle, workload isolation), strengthening baseline security across environments..

Oneex

February 2025 - September 2025

DevOps Engineer, End of studies Project

Clermont Ferrand , France

- Built a high-availability on-premise Kubernetes platform with automated failover, reaching 99.9% uptime.
- Migrated 8 legacy applications to microservices, improving scalability and deployment speed
- Strengthened platform security through service encryption (mTLS), secrets management, and system hardening (CIS standards)
- Implemented network segmentation and firewalling to secure communication across infrastructure
- Automated infrastructure provisioning (Terraform, Ansible), reducing deployment time by 95%
- Applied secure configuration and access control practices across cloud and on-prem environments

Zeliq

November 2023- May 2024

DevOps Engineer

Paris, France

- Reduced cloud costs by 30% through workload optimization and scaling strategies
- Improved CI/CD pipelines, reducing build times and increasing deployment reliability
- Set up monitoring and alerting systems, enabling faster issue detection and reducing downtime
- Automated deployment workflows, improving delivery speed and reducing manual operations

INTERNSHIPS

PerfectSoft

June 2024 - August 2024

DevOps Engineer, Summer Internship

Sfax, Tunisia

- Provisioned AWS infrastructure using Terraform with modular, reusable configurations.
- Implemented Prometheus/Grafana monitoring and alerting, improving system observability and reducing MTTR.

DataSphera

June 2023 - August 2023

DevOps Engineer, Summer Internship

Sfax, Tunisia

- Designed CI/CD pipelines integrating Docker, Git workflows, and Terraform.
- Implemented automated release management (Conventional Commits + semantic versioning) to standardize delivery processes.

STAM

June 2022 - August 2022

Data Engineer, Summer Internship

Sfax, Tunisia

- Built data pipelines using Kafka and Spark, enabling real-time data processing and analytics.
- Integrated BI tools to deliver actionable insights for business stakeholders.

CERTIFICATIONS

CKA, KCNA (Kubernetes) | AWS SAA | Azure Fundamentals: AZ-900, AI-900, DP-900, SC-900

EDUCATION & LEADERSHIP

- National Engineering Diploma in Data Engineering, Faculty of sciences of Sfax
- IEEE Student Branch Chair: Led 300+ members; earned Exemplary Student Branch Award.
- Securinets Technical Manager: Directed technical teams for 20+ national CTF competitions.

TECHNICAL SKILLS

- Security & Governance : IAM & RBAC, network segmentation , secrets management & encryption (Vault, mTLS), platform hardening & compliance (CIS, NIST)
- Cloud & Platforms : AWS (EKS, ECS, Route53), Azure (AKS), GCP, Bare Metal
- Orchestration & IaC : Kubernetes, Terraform, Ansible, Helm, Docker
- CI/CD & GitOps : ArgoCD, GitHub Actions, GitlabCI, Jenkins, Azure DevOps
- Observability & SRE : Prometheus, Grafana, Loki, Mimir, Datadog, ELK, OpenTelemetry
